Sms:chat

Service description

sms:chat is one more service that can make your website more profiting. Its installation is trivial and it is easy to implement it to any design; besides, while giving your visitors an opportunity to share their thoughts online, you raise their interest in your project, rendering it easier to remember and more likely to re-visit.

How does it work

Should you decide to spend some time on the **sms:chat** installation (see below), you will get convenient facility for accepting SMS-payments for the services you provide. Let your visitors engage in conversation, participate in quizzes and polls! By taking a creative approach, you will not only succeed as a webmaster, but also make some profit out of your website.

Installation and setup process

In order to get started with **sms:chat** service proceed to the [Control panel](#), [Chats](#) section. Press **Add** to create new **sms:chat**; carefully fill in the form. Follow the "HTML code" link in your **sms:chat** settings and copy/paste the code given into the appropriate place on your webpage; the installation is now complete! Technical details on the service implementation are given below.

SMS-payments and services

Technical info:

Installation

In order to integrate your **sms:chat** with your project, use the following markup (don't forget to replace **chat id** with your actual **sms:chat** id).

```
<script src="http://chat.smscoin.com/chat/?chat_id=chat id"
type="text/javascript">
</script>
```

The markup given must reside at the appropriate place of the target webpage.

SMS-payments and services

Adjusting

In order to adjust the chat to your needs, use the following optional parameters:

Параметр	Тип	Описание	По умолчанию
<code>lang</code>	<code>char(2)</code>	Biliteral language code	RU
<code>limit</code>	<code>int</code>	How many messages are displayed	20
<code>css_path</code>	<code>string</code>	Path to the CSS stylesheet	http://chat.smscoin.com/chat/style.css

For example, in order to reduce the number of simultaneously displayed messages to 10, use

```
<script src="http://chat.smscoin.com/chat/?chat_id=chat_id&limit=10&css_path=style.css" type="text/javascript">
</script>
```

Instead of `style.css` parameter you should provide the path to Stylesheets saved on your server.

Providing your own cascading style sheets (CSS) lets you adapt the appearance of the server to the website design. If necessary you can hide certain elements of the chat. For example, in order to hide the time when the message was sent and the nickname of the sender insert the following line in CSS:

```
.time, .nick { display: none; }
```

The list of classes in use is given in the [original CSS](#).
